Comfortable toilet use everywhere

Urine-diverting toilets by TROBOLO® allow you to use your toilet comfortably and hygienically no matter where you are. Simple, self-sufficient and sustainable. That is TROBOLO®. A clean solution.

This is what a urine-diverting toilet by TROBOLO® offers

No need to compromise

TROBOLO® enables access to hygienic and comfortable toilet systems that satisfy the highest standards – even in locations where this seems impossible.

With our TROBOLO® urine-diverting toilets, we managed to develop an autonomous and sustainable solution for your daily basic needs which does not require you to do without your usual comforts.

Autonomous usage

No water or sewer connection available? No problem. Urine-diverting toilets from TROBOLO® are autonomous and hygienic.

No odours

The TROBOLO® separation system reduces odours and in combination with litter or an exhaust system manages to completely eradicate all smells.

100% sustainable

The complete absence of chemicals and water allows for a straight-forward disposal and protects the environment.

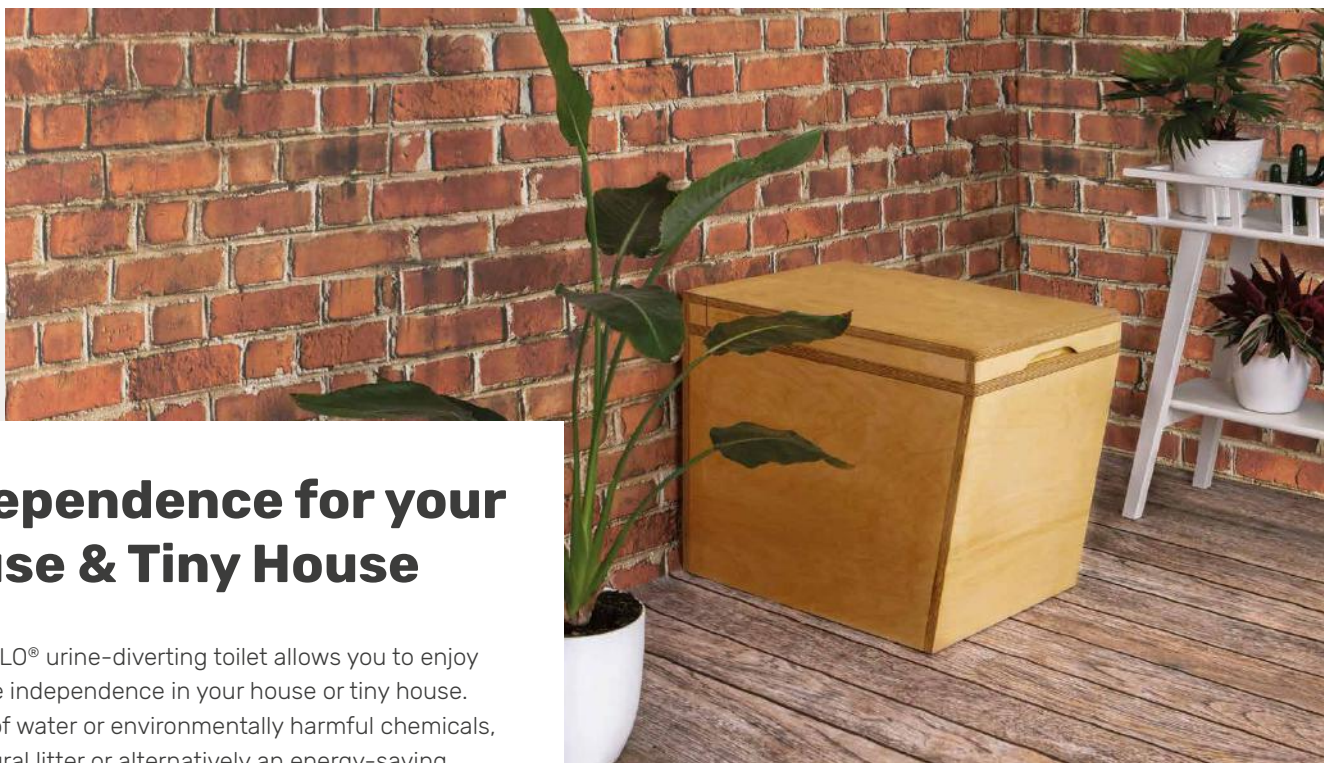

Easy emptying

Thanks to the TROBOLO® separation system, the emptying is easy, hygienic and can be done within a few steps.

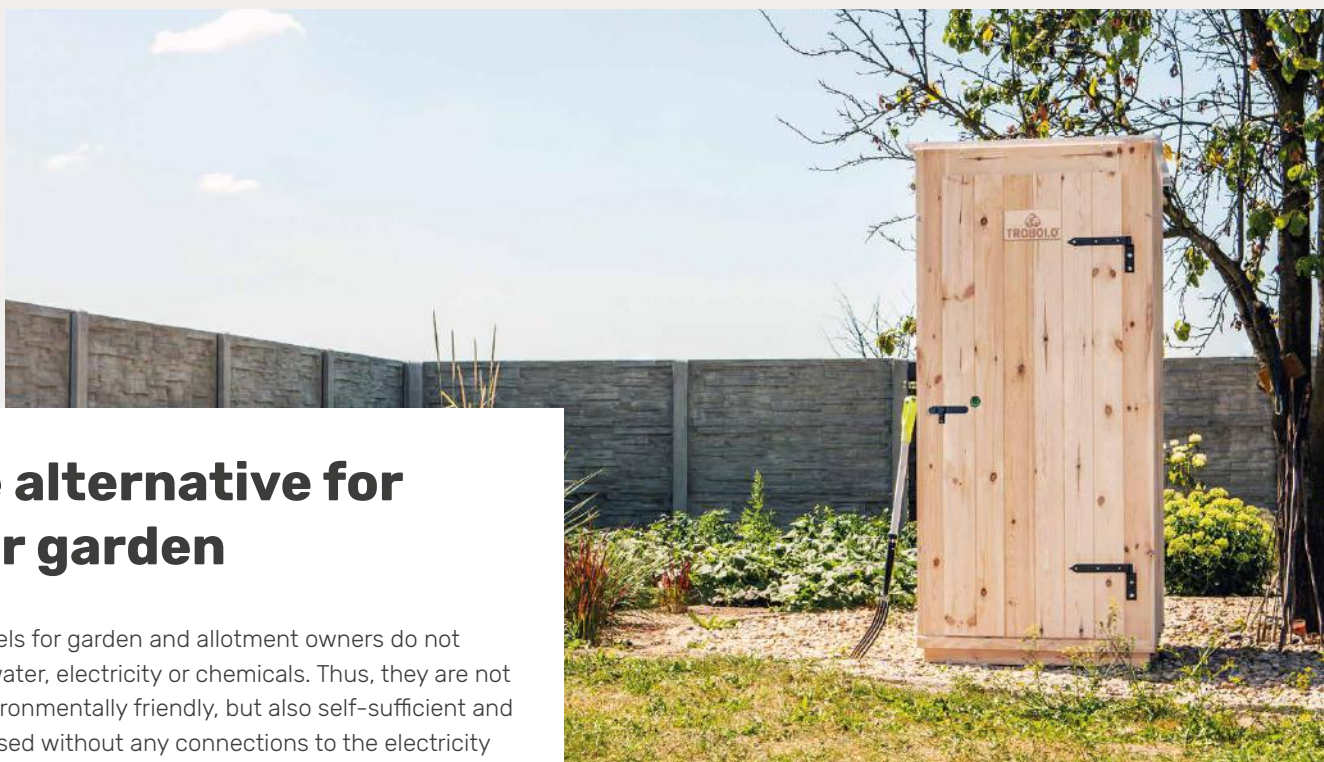

The right solution for every location

TROBOLO® urine-diverting toilets can be used in many different ways. We have the right model for every area of application. Our competent customer support team will be happy to advise you without obligation.

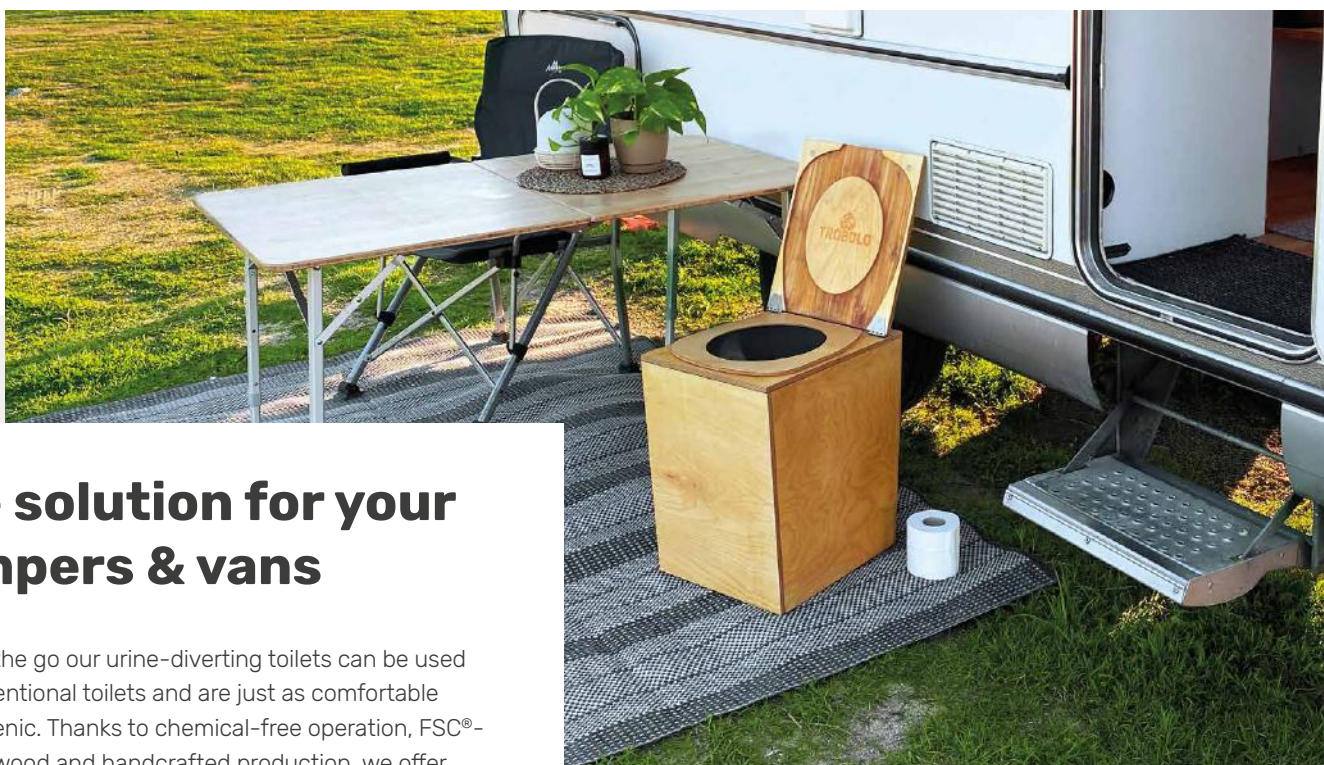

Independence for your house & Tiny House

A TROBOLO® urine-diverting toilet allows you to enjoy complete independence in your house or tiny house. Instead of water or environmentally harmful chemicals, only natural litter or alternatively an energy-saving exhaust air system is used.

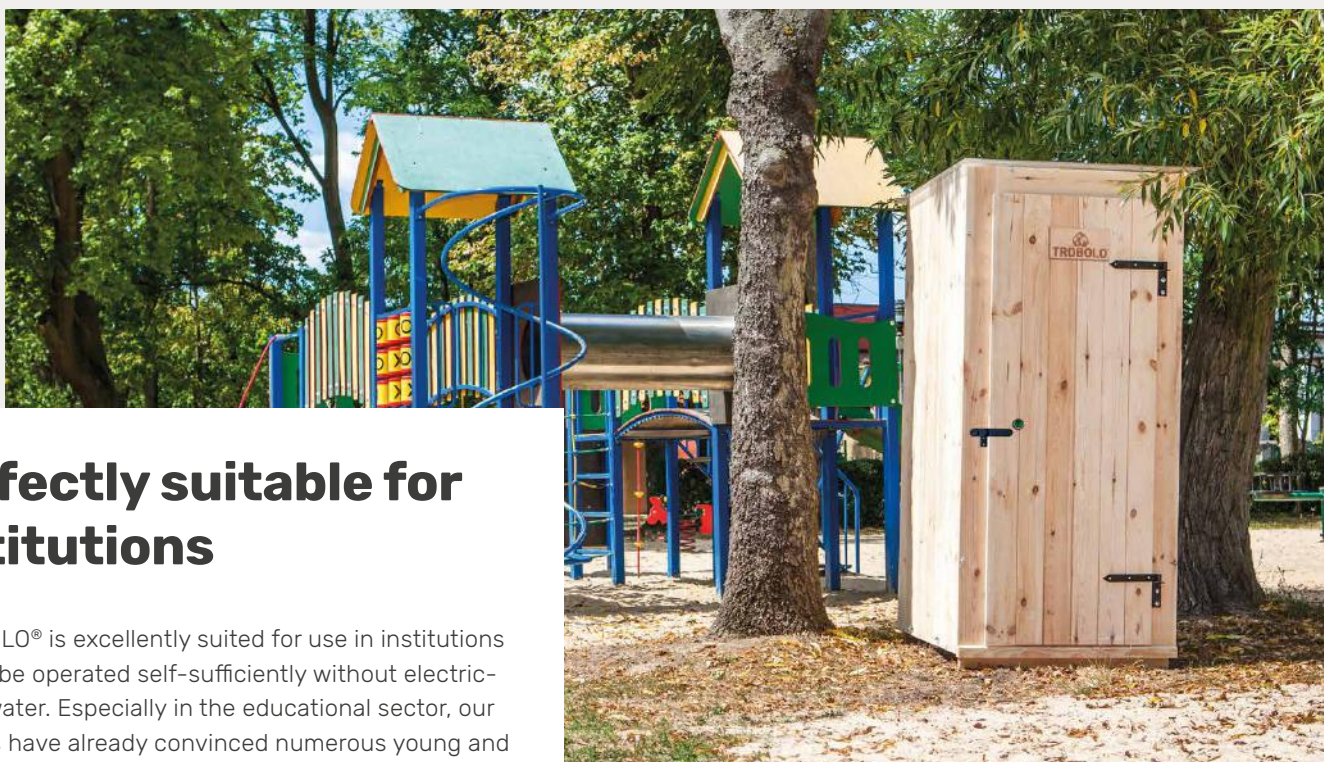

The alternative for your garden

Our models for garden and allotment owners do not require water, electricity or chemicals. Thus, they are not only environmentally friendly, but also self-sufficient and can be used without any connections to the electricity grid or the sewage system.

The solution for your campers & vans

Even on the go our urine-diverting toilets can be used like conventional toilets and are just as comfortable and hygienic. Thanks to chemical-free operation, FSC®-certified wood and handcrafted production, we offer you a fully sustainable solution.

Perfectly suitable for institutions

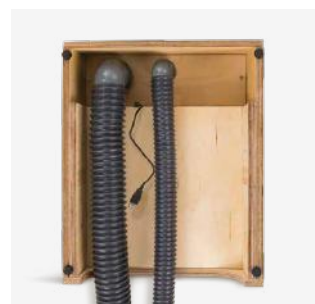

A TROBOLO® is excellently suited for use in institutions and can be operated self-sufficiently without electricity and water. Especially in the educational sector, our products have already convinced numerous young and old users alike.

TROBOLO® BilaBløem

item number: K2XX1371

Permanently installed urine-diverting toilet with electrical exhaust system and external urine drainage for motor homes and caravans.

- Especially compact dry separation toilet with urine drainage
- 100% odourless thanks to electric exhaust air system
- Specifically developed for installation in motor homes and caravans
- Environmentally friendly operation without water and chemicals
- Ready for use at any time, even while driving
- Easy and hygienic emptying
- Minimal power consumption
- Functions on 12V, 24V and 230V via USB port

Features

Hygienic usage

A TROBOLO® is used in the same way as a WC. The separation system is contactless, so that physical contact occurs exclusively at the toilet seat. Since the excreta only come into contact with plastic surfaces, cleaning is also hygienic.

Hand-crafted

Every single TROBOLO® is handcrafted with great attention to detail. The handmade toilet seat, which is given with a hygienic multi-coat lacquer finish, also ensures particularly comfortable seating.

Electrical exhaust system

Highly efficient and economical, the electrical exhaust air system conducts odours and moisture to the outside via the exhaust air duct, thus ensuring absolute odourlessness with very low power consumption. Max. amperage is 0.26 A, max. power consumption 1.3 W and noise level 19.3 dB.

Easy emptying

Thanks to the TROBOLO® separation system, removal of the internal solids container located is done in a few simple steps without coming into contact with the excreta and is therefore easy and hygienic.

Easy disposal

The TROBOLO® separation system enables separate disposal of solid and liquid precipitates. Like used diapers, solid waste can be disposed of together with inlays. The external liquids tank is emptied as waste water.

No chemicals

Due to the TROBOLO® separation system, there is no need for chemicals. The human excretions therefore do not turn into hazardous waste which would require a costly disposal that is also damaging to the environment.

Material

The TROBOLO® BilaBløem is made of high-quality FSC®-certified 12mm alder plywood, a material which is extremely robust and stable despite its low weight. The separation system is made of durable plastic and is surface sealed.

Easy cleaning

The excretions only come into contact with plastic surfaces, making cleaning easy and hygienic. The wooden surfaces are proofed with a natural oil and can be wet cleaned just like the toilet seat, which is sealed with an antibacterial protective coating.

Easy assembly

With the included assembly kit, the TROBOLO® BilaBløem can be easily and quickly mounted on the floor or rear wall of your vehicle. This provides a stable hold, even while driving.

No litter

The resulting moisture and residual odours are discharged to the outside via an electrical exhaust air system, which is why litter is not needed. Another advantage is having longer intervals between emptying.

Quality & Trust

We at TROBOLO® take the responsibility we have towards our planet seriously. Our claim and the highest premise in the manufacture of our products is to combine the very highest standards of quality and sustainability. All TROBOLO® products are manufactured exclusively by a selected medium-sized craft enterprise within the EU, and are subject to the strictest quality controls.

Sustainability with TROBOLO®

TROBOLO® is officially FSC®-certified. This means you can be sure that we use 100% timber from sustainable forestry for our products and have committed ourselves to economic, ecological and socially responsible management.

The Forest Stewardship Council® - FSC® for short - is an independent, non-profit NGO founded in Rio de Janeiro in 1993 and now represented in over 80 countries worldwide. The aim of the FSC® is to protect the world's forests and preserve them for future generations.

Comfort without compromises.

The Challenge was to develop hygienic and comfortable toilet systems that meet the highest demands, even in locations where this seems impossible. With our TROBOLO® urine-diverting toilets, our team has succeeded in developing an autonomous and sustainable solution for your daily basic needs without sacrificing the comfort you're accustomed to.

We look forward to advising you on the subject-contains sanitary technology and to sharing our know-how with you.

Our clients rate us
"excellent"

What more could you want?

We have been using this indoor toilet almost daily since the beginning of April 2018 and are very satisfied with it. The system is ingenious and easy to handle. What more could you want! No consumption of water, but free fertilizer, which we, but also our plants in the garden, are happy about. It is a pity that this product did not exist before. We can fully recommend this indoor toilet. Thanks to the developers.

Uwe A.

Thanks for the great idea!

To be honest, I was a little sceptical at first whether it would really work. But what can I say? It's better than I expected. We immediately bought the model with electric exhaust air and there is absolutely no odour whatsoever. It's funny that something like this hasn't been around for a lot longer, because then we wouldn't have had to buy expensive chemicals for the chemical toilet over the years. By the way, we have disposed of that by now... So thanks again for the great idea!

Annika H.

More than satisfied.

We bought the urine-diverting toilet for our garden at the beginning of spring on the recommendation of a friend, so that we don't always have to walk so far. Construction as well as the first emptyings were easy. So far we are more than satisfied and our garden is happy with the organic fertilizer.

Renate W.

A big praise to you.

I have owned a urine-diverting toilet for about 4 months and I am completely satisfied. I use it as an indoor toilet without exhaust air and it works wonderfully, without unpleasant odours. In the beginning I had some doubts, but these were quickly dispelled. A big praise to the manufacturers, great workmanship and quick feedback in case of questions!

Kerstin P.
